

“RZA-POSTACH” LLC presents a wide range of relay devices by RELSiS® trademark - from simple relays (current, voltage, time-delay, phase control etc.) to the intelligent microprocessor devices, cabinets and panels for connections 154-110-35-10 (6) kV, complex protection of electric motors, SCADA-system.

"RELSiS" R&D Manufacturing Enterprise is the most reliable Ukrainian manufacturer of electronic devices for electrical network relay protection automation and protection. The strategy of company is development and production of high quality and reliability devices that provide maximum cost efficiency and fit for every power engineering solution.

RELSiS® Company is an integrated full-scale enterprise of development , design and manufacturing, including such stages as market analysis, technical research, engineering design, laboratory testing, field testing, series manufacturing and application support with our customer services cooperation.

Our staf has many years of experience in comprehensive supply of relay protection and automation devices for companies of industrial and energy sectors.

Production of RELSiS® trademark is continuously increasing its volume, the products range extends by new devices and their special modifications. Till now RELSiS® microprocessor, electromagnetic and electronic relays have found their application in power systems of East-European and Middle East countries. To ensure high quality and reliability of products, our quality control system is managed according to international ISO 9001 standard requirements.

Beside the manufacturing products, we are glad to propose you our service of electrical cubicles and cabinets assembly according to your design projects or schematic and construction diagrams designed by our engineers on your requirements.
